- Docker
- GatsbyJS
- Jenkins
- Git
- Wordpress
- Unity3D
- Android
- MongoDB
- Google Analytics
- Jira
- MySQL / MariaDB

EXPERIENCE

- SOFTWARE DEVELOPER | *iHerb – Irvine, CA*** 2.2018 – Current
 - » Actively maintains and develops the front-end code bases (modern and legacy) for a large portion of the public pages on iHerb's international e-commerce site (iherb.com).
 - » Works with a small team of back-end and front-end developers to implement new features with time sensitive deadlines and fix problems immediately when they affect the production environment.
 - » Researched and implemented many SEO related optimizations, including a dynamic sitemap and micro-data.
- WEB DEVELOPER | *David Riley Associates – Corona Del Mar, CA*** 6.2017 – 1.2018
 - » Worked closely with design teams to come up with a beautiful and functional website that matches a clients brand, values, and goals.
 - » Communicated with clients to obtain project vision, address any problems during development, and to present finished work. Additionally provided training on how to use any unfamiliar systems to clients.
 - » Decided on technologies that need to be implemented for all new projects, including content management needs and 3rd party data connections.
 - » Maintained existing projects through backups and updates, as well as the companies own internal network and servers. This also included general office troubleshooting of phones, printers, and email.
- WEB DEVELOPER | *Worship Resource Media - La Mirada, CA*** 6.2016 – 12.2016
 - » Worked closely with a designer to implement wire-frame designs into functional web pages primarily utilizing React.js, HTML5, and CSS (SASS) on their primary website (WorshipBetter.com).
 - » Built Ruby on Rails controllers that interfaced with data models in order to highlight meaningful data.
 - » Developed a system to parse and recognize large portions of lyrical music data and compare it to multiple sources to add to our collected knowledge base.
 - » Participated regularly in Agile style system design and user interface meetings to contribute ideas and assign tasks in order to keep the project moving in the right direction.
- SOFTWARE DEVELOPER | *Chronicle Technologies - CA*** 7.2014 – 5.2016
 - » Implemented and maintained over four third party API integrations to import and export customer data regarding equipment and cost estimates through a server side .NET Windows Forms Application.
 - » Worked with two separate outside contractors to assist development of Chronicle's Android application, including the addition of push notifications, and SMS communications to create a unified system.
 - » Worked with customers and support teams to directly address and resolve problems related to integrations I had worked on or portions of our system I was familiar with.
 - » Responsible for resolving problems in legacy code as well as making it more efficient and extendable.
